# Folder Layout 5

Layout inspired by Material Design principals.
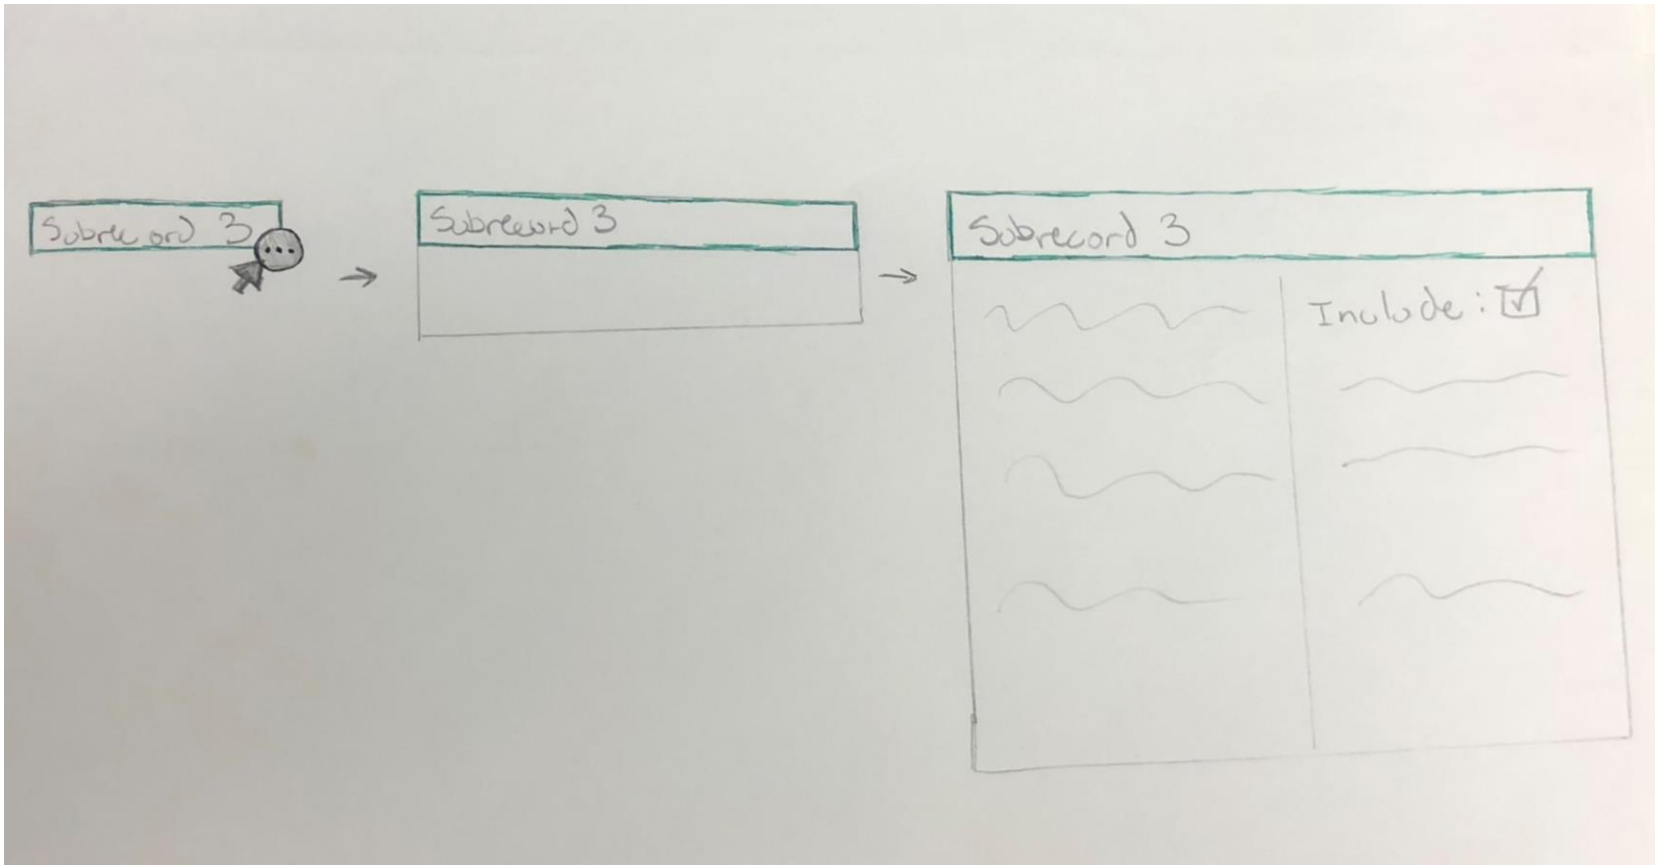

Main Layout

Include List Drawer

- Drawer with included subrecords in priority order pulls out with mouse over right margin
- Pulls closed on mouse out

Edit Subrecord Button

- With mouse over subrecord name tile, edit button appears

- Note: clicking on subrecord name tile selects it. One to many subrecords can be selected. With more than one selected, edit button (of any selected subs) expands group edit card instead of individual edit.

Edit Subrecord Card

On click of edit button, subrecord tile grows into card (taking up whole screen) with editable and uneditable fields.
